## Bobcat Demo Day

Jewll Industries

### What we learned in Prague

Jewll was invited to visit the astonishing headquarters of Bobcat in the beautiful city of Prague, Czech Republic. We had the privilege to see all of Bobcats' latest products perform their wide variety of tasks for their different fields, live in action. The areas of focus ranged from agriculture, to mining, to construction, to forestry and demolition. We also had the opportunity to stroll through Bobcats' manufacturing warehouse at the same time to see their full production line and get the know-how on how the vehicles are made from start to finish. This includes all the small components that go into the Bobcat machinery.

This photograph was taken by Bobcat media and within the photograph are all of the South African attendees, as well as some members from the Bobcat Worldwide team.

Jewll Industries

### Why Jewll is involved - Our services and what we did

What we offer:

Here at Jewll Industries we offer a wide variety of services that we can be applied to the already amazing Bobcat machinery. We can repair, refurbish and add components to any Bobcat machine to make it flameproof. Flameproof lighting, sirens and flameproofing of the electric cables and machinery as a whole is just the start. What is flameproofing you may ask? Flameproofing is the action whereby one alters a vehicle or machine to be able to operate in any hazardous area without the risk of ignition. Flameproofing is our specialty here at Jewll Industries and we are very proud to say that we have already completed *five* Bobcat repairs and flameproofing thereof in the past.

We not only saw the amazing machinery and got the opportunity to test each machine out in Prague, but we also experienced a special tour that Goscor had planned for us. On this tour we saw Prague on the back of trikes for two hours, and then we were treated to an amazing lunch at Lokal. We were then further spoiled with a sunset cruise with amazing views of the historical museums, buildings and bridges. That evening we traveled by foot to the center square over the Charles Bridge and watched the city's clock change into the next hour. This trip was unforgettable and we are so thankful to Bobcat, and the team at Goscor, for giving us this huge opportunity to see their latest product ranges up close and personal.
